

Don't Settle for Standards. Scale with SMART.

Standard vs. Customized Layouts

Customized cargo handling solutions from B&T Bearing help clients improve efficiency, reduce operational friction, and adapt more easily to future growth—all while optimizing every inch of valuable floor space.

CRITERIA

STANDARD LAYOUT

CUSTOMIZED LAYOUT

Time to Implement	Faster install but requires post-deployment adjustments.	Slightly longer install but tailored to your process from day one.
Efficiency Metrics	May underperform in areas of flow, control, or output due to generic fit.	Optimized throughput and better integration into existing operations.
Downtime Reduction	Increased risk of operational misalignment or future retrofits.	Reduces rework and unscheduled downtime by fitting exact specs.
Long-term ROI	Lower initial investment, but higher lifecycle costs due to inefficiencies.	Higher initial value, lower cost over time from improved productivity and uptime.
Fit-to-Space Flexibility	Limited adaptability; uses more floor space than needed.	Maximizes available space, adapts to layout constraints and expansions.

Tailored for Value & Performance
